

Skewer Through balloon:

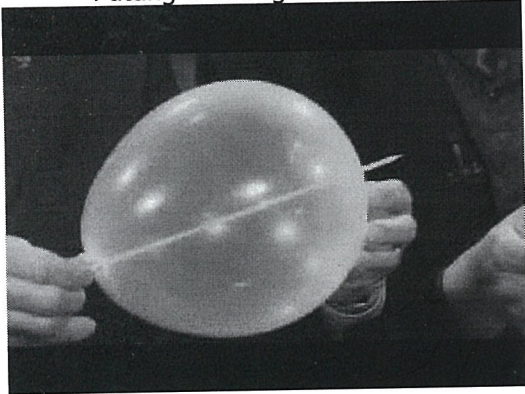

Skewer

Balloon

Dish Soap

1. Blow up a balloon and knot it
2. Put a little dish soap on the end of the skewer
3. Take the skewer, starting at the bottom of the balloon (where the knot is) push it through to the very top of the balloon and out.

Putting it through the less stressed (thicker area) areas. Leaving the skewer in the balloon .

The soap on the skewer stops molecules in the air from entering/exiting the balloon.

Film Canister Explosion:

Several film canisters
